

Disinfectants

Spark Range of Disinfectants

Spark product line comprises of broad spectrum bactericidal, fungicidal and viricidal solutions for use in all areas that require surface disinfection, decontamination and microbes free cleaning. Spark is a powerful disinfectant in a concentrated form that requires dilution based on the purpose.

Disinfectants are substances that are applied to non-living objects to destroy microorganisms that are living on that objects. Disinfection may not kill all microorganisms, especially resistant bacterial spores and it is less effective than sterilisation, which is an extreme physical and/or chemical process that kills all types of microorganisms. Disinfectants are different from other antimicrobial agents such as antibiotics, which destroy microorganisms within the body, and antiseptics, which destroy microorganisms on living tissue. Disinfectants work by destroying the cell wall of microbes or interfering with the metabolism.

Disinfectants are used in hospitals, dental surgeries, kitchens, and bathrooms to kill organisms that may cause infections.

Spark Range

Disinfectant - Bactericide - Virucide - Fungicide
For Hospital, Institutional & Home Use

Active Ingredients	4.1%
Hydrogen Peroxide	5.9%
Other Ingredients	90%
Inert Ingredients	100%
